Cultural Sociology of Mental Illness: An A to Z Guide looks at recent reports that suggest an astonishing rise in mental illness and considers such questions as: Are there truly more mentally ill people now or are there just more people being diagnosed and treated? What are the roles of economics and the pharmaceutical industry in this controversy? At the core of what is going on with mental illness in America and around the world, the editors suggest, is cultural sociology: How differing cultures treat mental illness and, in turn, how mental health patients are affected by the culture. In this illuminating multidisciplinary reference, expert scholars explore the culture of mental illness from the non-clinical perspectives of sociology, history, psychology, epidemiology, economics, public health policy, and finally, the mental health patients themselves. Key themes include Cultural Comparisons of Mental Health Disorders; Cultural Sociology of Mental Illness Around the World; Economics; Epidemiology; Mental Health Practitioners; Non-Drug Treatments; Patient, the Psychiatry, and Psychology; Psychiatry and Space; Psychopharmacology; Public Policy; Social History; and Sociology. Insider's Guide to Graduate Programs in Clinical and Counseling Psychology

Cancer care today often provides state-of-the-science biomedical treatment, but fails to address the psychological and social (psychosocial) problems associated with the illness. This failure can compromise the effectiveness of health care and thereby adversely affect the health of cancer patients. Psychological and social problems created or exacerbated by cancer-including depression and other emotional problems; lack of information or skills needed to manage the illness; lack of transportation or other resources; and disruptions in work, school, and family life-cause additional suffering, weaken adherence to prescribed treatments, and threaten patients' return to health. Today, it is not possible to deliver high-quality cancer care without using existing approaches, tools, and resources to address patients' psychosocial health needs. All patients with cancer and their families should expect and receive cancer care that ensures the provision of appropriate psychosocial health services. Cancer Care for the Whole Patient recommends actions that oncology providers, health policy makers, educators, health insurers, health planners, researchers and research sponsors, and consumer advocates should undertake to ensure that this standard is met.

The president's personal and passionate account of his twenty-five years in the service of humanitarian effort that won him the Nobel Peace Prize was received with the admiring respect of reviewers and readers and it will stand as the record of his brilliant post-presidential career. This is the story of President Jimmy Carter's post-presidency, the most admired and productive in the nation's history. Through The Carter Center, which he and Rosalynn Carter founded in 1982, he has fought neglected diseases, waged peace in war zones, and

built hope among some of the most forgotten and needy people in the world. Serving in more than seventy nations, Carter has led peacekeeping efforts for Ethiopia, North Korea, Haiti, Bosnia and Herzegovina, Uganda, and Sudan. With his colleagues from The Carter Center, he has monitored more than sixty-five elections in troubled nations, from Palestine to Indonesia. Carter's bold initiatives, undertaken with dedicated colleagues, have eliminated, prevented, or cured an array of diseases that have been characterized as "neglected" by the World Health Organization and that afflict tens of millions of people unnecessarily. The Carter Center has taught millions of African families how to increase the production of food grains, and Rosalynn Carter has led a vigorous war against the stigma of mental illness around the world. "Immersing ourselves among these deprived and suffering people has been a great blessing as it stretched our minds and hearts," Jimmy Carter writes. "The principles of The Carter Center have been the same ones that should characterize our nation, or any individual. They are the beliefs inherent in all the great world religions, including commitments to peace, justice, freedom, humility, forgiveness or an attempt to find accommodation with potential foes, generosity, human rights or fair treatment of others, protection of the environment, and the alleviation of suffering. This is our agenda for the future."

Psychology: Abnormal

Should a therapist ever shake hands with a client, or touch a client's hand or shoulder? There are taboos against erotic touch in psychotherapy, for excellent reasons, but what about nonerotic touch? These latter forms of physical contact are not explicitly taboo and they can be powerful forms of communication. Research and clinical experience indicate that they can contribute to positive therapeutic change when used appropriately. What, then, is appropriate use?
