Professor McNabb has produced an excellent overview of the management challenges facing public utilities in the 21st century. His description of the evolution, changes, and challenges of different types of utilities is insightful. What makes this book uniquely valuable is his addressing the variety of utility management responsibilities including human resources, information services, and strategic planning in a single volume. I recommend it highly. Jeffrey Showman, Washington Utilities and Transportation Commission, US An introduction to the current issues and challenges facing managers and administrators in the investor and

publicly owned utility industry, this engaging volume addresses management concerns in three sectors of the utility industry: electric power, natural gas, and water and wastewater systems. Beginning with a brief overview of the historical development of the industry, the author looks at policy issues and discusses management ethics. He then examines a number of the major challenges in these organizational functions: management and leadership, planning, marketing, accounting and finance, information technology, governance, and human resources. In the final section of the volume he looks at issues specific to each of the three industry sectors. Accessible and comprehensive, this thoughtful exploration of the various issues facing managers in public utilities in the new century will prove a useful overview for students of business and economics, utility staff, and directors of local utility governing boards.

Drawing on recent advances in social science, these essays demonstrate how rigorous, theory-based research in public management can improve government performance. They reflect the improved techniques in data and statistics which allow researchers to construct more incisive models of governance.

The emphasis throughout this treatment of computer-aided design is on fundamental principles.; Consequently, the book focuses on the ways in which various tasks and procedures in design can be formalized, on the ways in which geometrical and other properties of designed objects may be represented, and on the significance of computer aids for the theory and practice of design. The four-part treatment divides into conceptual and mathematical foundations, geometric modelling, analysis and synthesis, and advanced concepts.

The reputation of corporate reporting has been in crisis. Trust in the process of financial accounting and auditing has been undermined by a series of high profile scandals involving major corporations, including Enron, Parmalat, Ahold, and Worldcom. In response, regulators and practitioners world-wide have put forward a series of initiatives to repair the damage and restore faith in corporate governance. In this important book, the European Auditing Research Network analyzes how that response has developed in Europe, with particular emphasis on the field of auditing. Leading international academics review how regulation has been revised in specific European countries to help restore confidence in the contribution of auditing to corporate governance. Various themes are explored, including the growing trend of internationalization in regulation, ethics and auditing, professional liability, and professional education. Auditing, Trust and Governance is an invaluable volume for students, researchers and professionals working in the fields of auditing, accountancy and corporate governance, and provides a useful basis for further research on the effects of the increased regulation.

Auditing, Trust and Governance

New information and communication technologies can make a significant contribution to the achievement of

good governance goals. This 'e-governance' can make governance more efficient and more effective, and bring other benefits too. This paper outlines the three main contributions of e-governance: improving government processes (e-administration); connecting citizens (e-citizens and e-services); and building external interactions (e-society). Case studies are used to show that e-governance is a current, not just future, reality for developing countries. However, most e-governance initiatives fail. Countries therefore face two challenges. First, the strategic challenge of e-readiness: preparing six identified pre-conditions for e-governance. Second, the tactical challenge of closing design -- reality gaps: adopting best practice in e-governance projects in order to avoid failure and to achieve success. A vision for change is therefore outlined of which more details are given in a related paper.

The present stage of the human civilization is the e-society, which is build over the achievements obtained by the development of the information and communication technologies. It affects everyone, from ordinary mobile phone users to designers of high quality industrial products, and every human activity, from taking medical care to improving the state governing. The science community working in computer sciences and informatics is therefore under constant challenge; it has to solve the new appeared theoretical problem as well as to find new practical solutions. The fourth ICT Innovations Conference, held in September 2012 in Ohrid, Macedonia, was one of the several world-wide forums where academics, professionals and practitioners presented their last scientific results and development applications in the fields of high performance and parallel computing, bioinformatics, human computer interaction, security and cryptography, computer and mobile networks, neural networks, cloud computing, process verification, improving medical care, improving quality of services, web technologies, hardware implementations, cultural implication. In this book the best 37 ranked articles are presented.

This book, based on Transport and Urban Development COST Action TU1208, presents the most advanced applications of ground penetrating radar (GPR) in a civil engineering context, with documentation of instrumentation, methods and results. It explains clearly how GPR can be employed for the surveying of critical transport infrastructure, such as roads, pavements, bridges and tunnels and for the sensing and mapping of underground utilities and voids. Detailed attention is also devoted to use of GPR in the inspection of geological structures and of construction materials and structures, including reinforced concrete, steel reinforcing bars and pre/post-tensioned stressing ducts. Advanced methods for solution of electromagnetic scattering problems and new data processing techniques are also presented. Readers will come to appreciate that GPR is a safe, advanced, non destructive and noninvasive imaging technique that can be effectively used for the inspection of composite structures and the performance of diagnostics relevant to the entire life cycle of civil engineering works.

A central puzzle in jurisprudence has been the role of custom in law. Custom is simply the practices and usages of distinctive communities. But are such customs legally binding? Can custom be law, even before it is recognized by authoritative legislation or precedent? And, assuming that custom is a source of law, what are its constituent elements? Is proof of a consistent and long-standing practice sufficient, or must there be an extra ingredient - that the usage is pursued out of a sense of legal obligation, or, at least, that the custom is reasonable and efficacious? And, most tantalizing of all, is custom a source of law that we should embrace in modern, sophisticated legal systems, or is the notion of law from below outdated, or even dangerous, today? This volume answers these questions through a rigorous multidisciplinary, historical, and comparative approach, offering a fresh perspective on custom's enduring place in both domestic and international law.

This third edition of *Teaching and the Case Method* is a further response to increased national and international interest in teaching, teachers, and learning, as well as the pressing need to enhance instructional effectiveness in the widest possible variety of settings. Like its predecessors, this edition celebrates the joys of teaching and learning at their best and emphasizes the reciprocal exchange of wisdom that teachers and students can experience. It is based on the belief that teaching is not purely a matter of inborn talent. On the contrary, the knowledge, skills, and attitudes that make for excellence in teaching can be analyzed, abstracted, and learned. One key premise of *Teaching and the Case Method* is that all teaching and learning involve a core of universally applicable principles that can be discerned and absorbed through the study and discussion of cases.

What essential leadership lessons do we learn by distilling the actions and ideas of great military commanders such as George Washington, Dwight D. Eisenhower, and Colin Powell? That is the fundamental question underlying *The Art of Command: Military Leadership from George Washington to Colin Powell*. The book illustrates that great leaders become great through conscious effort—a commitment not only to develop vital skills but also to surmount personal shortcomings. Harry S. Laver, Jeffrey J. Matthews, and the other contributing authors identify nine core characteristics of highly effective leadership, such as integrity, determination, vision, and charisma, and nine significant figures in American military history whose careers embody those qualities. *The Art of Command* examines each figure's strengths and weaknesses and how those attributes affected their leadership abilities, offering a unique perspective of military leadership in American history. Laver and Matthews have assembled a list of contributors from military, academic, and professional circles, which allows the book to encompass diverse approaches to the study of leadership.

This volume addresses recent and ongoing ethnobotanical studies in the Balkans. The book focuses on elaborating the relevance of such studies for future initiatives in this region, both in terms of sustainable and peaceful (trans-regional, trans-cultural) rural development. A multi-disciplinary viewpoint is utilized, with an incorporation of historical, ethnographic, linguistic, biological, nutritional and medical perspectives. The book is also authored by recognized scholars, who in the last decade have extensively researched the Balkan traditional knowledge systems as they pertain to perceptions of the natural world and especially plants. *Ethnobotany and Biocultural Diversities in the Balkans* is the first ethnobotany book on one of the most biologically and culturally diverse regions of the world and is a valuable resource for both scholars and students interested in the field of ethnobotany.

Curriculum and Instructional Methods for the Elementary and Middle School

Each chapter in the book is firmly rooted in research and is well referenced as one would expect of such a book. It will be of particular use to people with an academic interest in this aspect of school management but will also be thought-provoking for those who are involved in the development of the curriculum within their institution? - escalate This book explores many of the new aspects of the core business of schools and colleges, that is, the curriculum. Keeping the focus clearly on learning and teaching, the contributors explore the practical issues for managers at institutional level, within the context of their need to understand and analyze key educational values and principles. Part One presents overviews of theories and models of curriculum, while Part Two examines how these are applied through planning, monitoring and evaluating. Part Three explores in detail the various managerial roles within schools and colleges from leaders to those responsible for cross-curriculum work and special educational needs. The fourth part discusses the importance of effectively managing resources for the curriculum - the environment, support staff and finance. Contributors use empirical research evidence to analyze current curriculum trends whilst proposing various new models which are likely to emerge in the 21st century.

The Art of Command

George Kennedy's three volumes on classical rhetoric have long been regarded as authoritative treatments of the subject. This new volume, an extensive revision and abridgment of *The Art of Persuasion in Greece*, *The Art of Rhetoric in the Roman World*, and *Greek Rhetoric under Christian Emperors*, provides a comprehensive history of classical rhetoric, one that is sure to become a standard for its time. Kennedy begins by identifying the rhetorical features of early Greek literature that anticipated the formulation of "metarhetoric," or a theory of rhetoric, in the fifth and fourth centuries b.c.e. and then traces the development of that theory through the Greco-Roman period. He gives an account of the teaching of literary and oral composition in schools, and of Greek and Latin oratory as the primary rhetorical genre. He also discusses the overlapping disciplines of ancient philosophy and religion and their interaction with rhetoric. The result is a broad and engaging history of classical rhetoric that will prove especially useful for students and for others who want an overview of classical rhetoric in condensed form.

This book provides an overview of air quality in Albania evaluated by moss biomonitoring and metals atmospheric deposition. It is based on the concentration data onto 51 elements in moss samples collected during 2010/2011 moss biomonitoring survey conducted at the same time with European moss biomonitoring survey. The elements under investigation were determined by using ICP-AES and ENAA analytical techniques. Moss species *Hypnum cupressiforme* (Hedw) sps., a carpet-forming bryophyte, was used as bioindicator of trace metal atmospheric deposition. The goal of this study was to identify factors leading to the high levels of trace metals in atmospheric deposition in Albania, to identify the risk factors and the

origin of trace metals in atmospheric deposition. It may help the policy makers and regulators to take proper decisions to protect the public health and the environment. The distribution pattern of the elements was visualized by using the geographic information system, GIS 10.2. The predicted trends of the distribution were calculated by using time series (linear model) and the areas with high concentration of certain metals were suggested for monitoring and to be under control.

"The legal Code of the Albanians known by them for a thousand years, is one of the most original in the history of mankind. Among the basic pillars of this code are the equality of men before the code & the non-abuse of justice."
